Product Description

Leaders know how to do all the components of a Security Program, but these components have lacked efficient and effective Integration and Management.

The TotalSecurity.US Management System (TSMS™) integrates and manages:

- **Threat and Vulnerability Assessments**
- **Security Operations and Plans**
- **Training Programs**
- **Drills, Exercises, and Incidents**

The Problem

When different people write security plans it is difficult to ensure that all essential elements have been covered. Completeness and uniformity are a constant challenge.

Making the Vision a Reality

The TSMS™ gives leaders and managers the ability to prioritize limited security resources (including budget items) based upon the relative criticality of sites and operations and specific threat scenarios.

The TSMS™ also allows for the ability to have general security elements as well as site or operation specific elements in the same, closely monitored system.

The TSMS™ is the perfect solution for both government and commercial leaders to plan for and respond to multiple threats and multiple sites in an efficient and cost effective way.

For more information on the TotalSecurity.US Management System (TSMS™), please contact TotalSecurity.US at 703-294-4100 or visit our company website www.TotalSecurity.US.

All elements of the TotalSecurity.US Management System are linked for easy access to critical security information.
