Product Description

(US Patent # 5,449,864)

Not only does SOLID SHIELD® detect potential threats; it also identifies within a vehicle the amount and location of the potential threat. This unique capability protects your site by overcoming the complacency inherent to most screening operations where operators “go through the motions,” never knowing if a threat is present.

The Value of Deterrence!

Solid Shield® offers an innovative advantage by combining threat detection with powerful deterrent capability. Potential criminals and terrorists will quickly understand that Solid Shield® detects and records their attempt to penetrate the site with potential threat material.

For more information, please contact Total Security Services International at 301-998-6164 or visit our company website www.tssi-inc.com.

SOLID SHIELD® screens passenger vehicles for the following:

- **Car Bombs**
- **Concealed Cargo**
- **Hidden Individuals**
- **Other items that can be used to inflict high-level damage to your location**

The patented system utilizes a high precision, multi-platform vehicle weighing system coupled with advanced software.

The vehicle approaches the system and is identified and screened for potential threats, all in the time it takes to issue a parking garage entry ticket!

HOW DOES SOLID SHIELD® WORK?

Solid Shield® immediately alerts your screeners when a vehicle is out of spec—and tells them where in the vehicle the potential threat is, for quick action!
